

Welcome to my UI. Kiseki UI is a holy paladin ONLY UI. Standtard screen resolution is [1280x768] the UI scaling stays at a fixed ratio of "0.65".

-----

#### IMPORTANT NOTICE:

EXAMINE MEEKASETTINGS AS IT PROFOUNDLY TWEAKS WOW. IF INSTALLED ON A WEAKER COMPUTER WOW WILL CRASH.

PLEASE EXAMINE THE DEFINED VARIABLES SECTIONS AND CONFIGURE TO WHAT YOUR CPU CAN HANDLE.

-----

As of Release 2 I do not have a pally anymore. My account is frozen and I've stopped playing it. I might update again for Cataclysm if paladins interest me again. Nonetheless, what this means is there are 3 things that I was not able to configure since I updated the UI for 4.0.1 on my druid.

One: Holy Trinity a cooldown and holy power bar display was not configured since it only loads on paladins. Disable or configure it to your liking.

Two: Paladin timer bars for ie. Daybreak, Infusion, Beacon, Judgements, HandOfLight, etc were not configured at all because they will nto load for my druid.

Three: VuhDo's pally buffs/aura bar on the top right of the screen was not configured because again I am not a paladin. Fix it to your liking when loaded.

-----

If for any reason you have a different screen size and want a different scaling I am not able to configure the UI again for you. I try to be as generic as possible, but auto I don't know how to accomplish auto scaling yet.

IF you would like to change the UI scaling at your own risk, find the line in MeekaSettings (addon) that says: "SetCVar("uiScale", "0.65")" without quotes. I do not give support to users that change the scaling as it's pretty much redoing all the addon placements on screen.

BEFORE loading this UI PLEASE PLEASE copy your old WTF and Interface folders. I've included macros and keybindings that may not be to your liking. There are two addons you will need to fix bindings for, GoGoMount and BindPad. I usually bind GoGoMount to my Q key. For items/spells I use BindPad. Bindpad is totally up to you, you can bind anything to it.

-----

#### How To Install:

1. BACK UP YOUR UI!!!! AND MACROS ESPECIALLY in your WTF folder "macros-cache.txt"
2. Delete any WoW folders that you may have i.e. WTF/Interface/Fonts
3. Copy the interface package into your WoW folder.
4. Navigate through WTF and rename [ACCOUNT NAME], [Server Name], [Character Name] to your account, server and character respectively.
5. Start the game and make sure under add-ons that "load outdated addons" is checked if it's not.
6. Once you have logged in, click yes to the UI installer. Once it has reloaded fix your video settings.

#### Common Issues That Will Be Fixed Later On:

+The target buff/debuff frame does not color the borders according to the buff/debuff type. This is a limitation of Satrina's Buff Frames sadly.

-----

#### Tips:

Disable AuctionLite on your main's addon list. When you start scanning AH prices often it

remembers those prices and the memory size starts to grow. Which can be bad in raids...  
MeekaSettings now has module switches which allow you to select what you want and what you don't want. Please look at this page for the massive feature list on meekasettings:
